

Mr Mario Pigazzini

Psychologist - IPA Psychoanalyst

Visiting Research Fellow

UNIVERSITY of ADELAIDE

Dep. of Psychiatry at the R.A.H.

On the 2nd of June

I will introduce my research on the construction of

A methodology for the measurement
of therapeutic process
within the specific field of

Psychoanalysis

and

Psychoanalytic Psychotherapy .

*In the introduction I will illustrate
Freud's intention to build up*

A new psychological treatment for neurosis
Based on the methodology of natural sciences

His project has never been realised

In the last decade

Many Psychoanalysts have suggested that

Non-linear dynamic system theories

could be the avenue

for the measurement in psychoanalysis

The core of my presentation will concern:

The choice of an appropriate mathematical paradigm;

The construction of a specific model

and

The selection of variables to build up a grid;

*The results of a pilot study,
showing diagrams and graphs and analysing them.*

Make a new proposal for a wide research

In conclusion I will show

*The value of this research
and
The possible future expansion.*

Thank you
